Who I Am

Ensuring technically valid AI is behaviourally effective, where human judgment and trust determine success or failure.

- PhD in Psychology and Bachelor of Science in Computer Science

- 10+ years across government, enterprise, and complex digital ecosystems

- Hands-on with GenAI and RAG in environments where outputs shape real decisions, not demos

- Specialised in adoption, cognitive friction reduction, and evidence-based AI strategy

- Improved digital decision-making across national-scale government programs

- Identified and reduced cognitive friction that was actively degrading decision quality in enterprise workflows

Where I Add the Most Value

Most AI failures stem from over-confidence, automation bias, decision drift, and misplaced trust.

AI Strategy & Adoption

- GenAI and RAG use-case discovery
- Operating models & capability uplift
- Behavioural risks, trust & ethics

Behavioural & Systems Research

- Cognitive analysis & decision-making
- Quantitative & qualitative insight generation
- Complex environment mapping & service evaluation

Decision Infrastructure

- AI-enabled workflows & journeys
- Orchestrating multi-agent reasoning loops
- Hardening AI systems against cognitive over-reliance
- Behaviourally-informed product direction

Technical Fluency

Python • SQL • RAG pipelines • Prompt engineering • Cloud-based deployments

Availability

For organisations needing senior AI judgment without visa friction.

Available Internationally

- Open to roles in government, consulting, enterprise, research, and tech

- Comfortable with remote, hybrid, or relocation

- Experienced collaborating across time zones and distributed teams

For US Employers

As an Australian citizen, I qualify for the **E-3 Specialty Occupation Visa**, which offers:

- No lottery

- Fast, predicable processing

- No filing fees for employers

- Straightforward for HR teams (LCA & offer letter)

- Renewable indefinitely

- Hireable like a US candidate
